DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the inventio0n was made.

Claim 43 is rejected under 35 U.S.C. 103(a) as being unpatentable over WO 98/51277 in view of WO 97/27835, JP 09030946, WO 96/17605, Chiou et al. and Shen et al..

WO 98/51277 disclose that compounds which act as antioxidants, have ant-inflammatory activity, and inhibit reactive oxygen species or nitric oxide, can protect skin against oxidative injury and thereby reduce skin aging and wrinkling (Page 20, lines 16-31, Page 21, lines 13-15, Page 21, lines 24-38, Page 22, lines 1-21).

JP 09030946 teaches the use of extracts Andrographis in oil-in-water preparations for skin lightening which inhibits melanin formation and tyrosinase (paragraphs 0004-0035).

WO 96/17605 teach that extracts of Andrographis contain andrographolide compounds (pg. 6).

Chiou et al. disclose that andrographolide is an inhibitor of nitric oxide and has antiinflammatory activity (Page 1553).

Shen et al. disclose that androgpholide has activity against reactive oxygen species (page 314).

WO 98/51277 disclose that compounds which act as antioxidants, have ant-inflammatory activity, and inhibit reactive oxygen species or nitric oxide, can protect skin against oxidative

Page 3

injury and thereby reduce wrinkling. The difference between WO 98/51277 and the claimed invention is that WO 98/51277 does not expressly disclose the claimed method of treating wrinkles and fine lines with andrographolide. However, the prior art amply suggests the same as JP 09030946 discloses the use of andrographolide for treatment of skin which lightens the skin; WO 96/17605 teach that extracts of Andrographis contain andrographolide compounds; Chiou et al. disclose that andrographolide is an inhibitor of nitric oxide and has anti-inflammatory activity; Shen et al. disclose that androgpholide has activity against reactive oxygen species. As such, one of ordinary skill in the art would expect that andrographlide compounds would be suitable for topical application to the skin in a cosmetic formulation and that due its anti-inflammatory activity via its action as a nitric oxide and reactive oxygen species inhibitor, topical application of the same would be effective in reducing skin aging and wrinkling.

The Examiner has duly considered the Applicant's arguments but deems them moot in light of the new grounds of rejection herein.

Therefore, the claimed invention, as a whole, would have been *prima facie* obvious to one of ordinary skill in the art at the time the invention was made, because every element of the invention has been collectively taught by the combined teachings of the references.

Conclusion

A facsimile center has been established in Technology Center 1600. The hours of operation are Monday through Friday, 8:45 AM to 4:45 PM. The telecopier number for accessing the facsimile machine is 571-273-8300.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Frank Choi whose telephone number is (571)272-0610. Examiner maintains a compressed schedule and may be reached Monday, Tuesday, Wednesday and Thursday, 6:00 am -4:30 pm (EST).

If attempts to reach the Examiner by telephone are unsuccessful, the Examiner's Supervisor, Johann R. Richter, can be reached at (571)272-0646. Additionally, Technology Center 1600's Receptionist and Customer Service can be reached at (571) 272-1600.
